

Quick Look-up Continuous Flow Production Rates

Each single module produces:

	Cu.Ft	Gal.	Yards	Lbs.*
Per Week	5	38	0.2	165
Per Month	22	164	0.8	725
Per Year	265	1,975	10	8,700

** Assuming 33 lb/cu.ft.. Actual weight varies based on moisture and feedstock type and mix*

Bulk Measures of Vermicompost (approx):

5 gal (bucket) = 22-25 lb

1 cu.ft = 7.5 gal

1 cu.yard = 202 gal = 27 cu.ft

1 ton = 2+ yards

Pre-composting reduces feedstock weight and volume

Food scraps will reduce by about half

Manure+bedding will reduce by about 1/4
